Test bench on request

Test Bench

MRTech & SisNovam engineering departments have designed several types of test bench during the past years, mainly for hydrogen applications. Each test bench design has been performed according to the client requirements and measurement purposes. Most of the times measure equipments are provided by the customer : the engineering department has to take into account ergonomics, technical constraint, easy change of the test object and other inputs. Orbital welding, cone and thread or VCR connectors, twin ferrule fittings are part of our know-how for these equipments assembling.
